

Manually adding Visual Studio Code Extensions

1. Navigate to the **.vscode** as follows:

`C:\Users\user name\.vscode`

(if you are using the lab computers then **user name** should be the account that you have used to log in into the computer). Note, if Visual Studio code is installed but you do not have the **.vscode** folder, then simply open Visual Studio code and close it again, and the folder should be created automatically.

2. Within the **.vscode** folder you should find a folder named **extensions** and a file named **argv.json**. Open the extensions folder. If you find one file inside the extensions folder, then delete the **extensions** folder and the **argv.json** file. After that extract/unzip the **VSCoDeFiles.zip** file provided on Google Drive. When you extract/unzip this file, there should be an **argv.json** file and an **extensions.zip** file. Copy the **argv.json** file to the **.vscode** folder and unzip/extract the **extensions.zip** file to the **.vscode** folder. Within the **.vscode** folder, the open the extensions folder (after unzipping) and the contents should look like the following:

 aliasadidev.nugetpackagemanagergui-2.0.6	15/02/2023 10:06	File folder
 cschlosser.doxdocgen-1.4.0	13/03/2022 22:53	File folder
 fernandoescolar.vscode-solution-explorer-0.8.2	22/03/2023 11:51	File folder
 jeff-hykin.better-cpp-syntax-1.17.2	07/01/2023 14:14	File folder
