

Lab 1 Resources

On Google classroom, there are two zip files as follows:

- VSCodeFiles.zip
- mingw64.zip

The folder you get when you extract **VSCodeFiles.zip**, will be needed when you do Lab **1_2_Manually adding Visual Studio Code Extensions**.

The folder you get when you extract **mingw64.zip**, will be needed when you do Lab **1_6_Using GCC C++ Compiler with MinGW**, if you are using your own computer. However, if you are using the computers in the COM labs, contents from **mingw64.zip** are already available in the lab computers.

Things to Note

- Regard Lab **1_1_Download and install Visual Studio Code**, you do **NOT** need to download and install Visual Studio Code if you are using the COM lab computers. However, if you are using your own computer and you do NOT yet have Visual Studio Code installed, then will need to download and install Visual Studio Code, as detailed in Lab 1_1.
- Regarding Lab **1_5_Configure Visual Studio Code cpp Extensions**, as a result of doing Lab **1_2_Manually adding Visual Studio Code Extensions**, you will **NOT** be required to do Lab **1_5**, since the end result will be the same. However, it is necessary for you to read through Lab **1_5**, since this provides information relating to how Visual Studio Code extensions can be downloaded and installed within Visual Studio Code.
